Revision Plan

1. Rework assets to be more polished, which includes replacing the current placeholder furniture. Sound effects may also be added during player movement or upon object interaction. Cutscene can be added during sleep.
2. A walking cycle animation will be added to the sprite when it is moving around the screen, as it is currently a static image. The logo will also be updated.
3. Additional visual effects may be added later, or quality-of-life enhancements, such as not colliding with the furniture itself, could be a feature to consider. More commentary that speaks on the deeper topics of our project may be added to the ending screen, while still fitting into the theme of the game itself.

Playtest notes:

- Typing feels slow - increase speed
- Make mouse indicator go away on text box
- Some keyboards don't have F10
- initial message in each chat doesn't show anything - is all black
- F2 on menu doesn't do anything, confusing

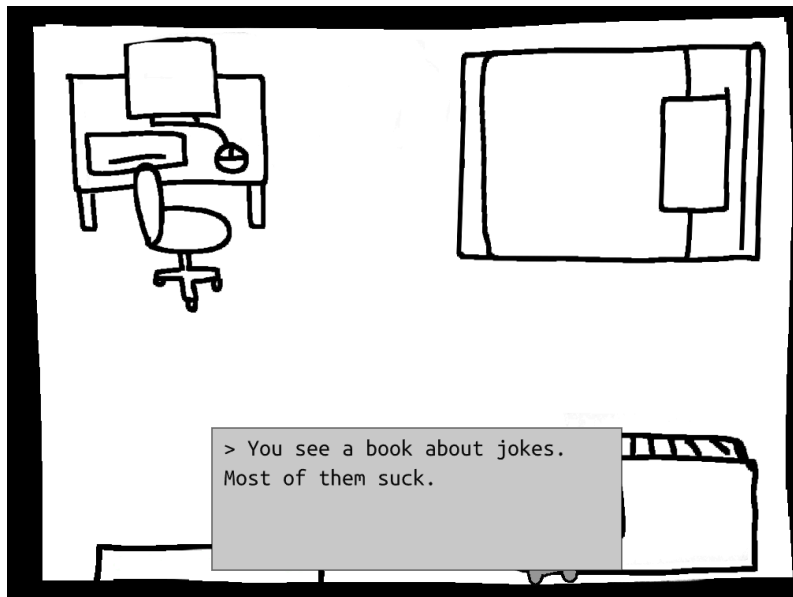

Screenshots Set

```
<A>: hello?  
<u>: Who are you?  
<A>: oh, let me ask first  
<A>: can you introduce yourself?
```

(Answer)

(State Confusion)
I'm not sure, do you know anythi

Introductory chat screen with dialogue hover feature.

Room exploration scene where pop-ups are shown upon object being clicked when in the sprite's range.

```
> PLAYER.DATA

user@system:~$ rm -rf /home/user/documents
user@system:~$ rm -rf /home/user/pictures
user@system:~$ rm -rf /home/user/downloads
user@system:~$ rm -rf /home/user/music
user@system:~$ sudo kill --all
user@system:~$ clearing cache.....
user@system:~$ deleting memory.data
user@system:~$ system shutdown initiated
